Digital Receipt Server

For Prizma, Crypto, Self-Checkout and Integrated Dispenser Terminals.

Energy retailers save time and money using this simple, eco-friendly solution.

Then:

Digital receipt systems have been available for some time, typically involving a long-winded customer setup process of downloading an app and completing registration via the website, by providing full name, address, email and phone number – before they can receive a digital receipt. Those days are over!

Now:

Available from TSG UK, the all-new digital receipt server for Prizma, developed by Dover Fueling Solutions, (also compatible with self-checkout and integrated dispenser terminals). This innovative new feature allows customers to choose a digital receipt rather than a paper one.

How the Digital Receipt Server works

Once the customer's transaction is complete, the cashier simply selects the 'print digital receipt' on the Prizma's screen. A quick response (QR) code appears on the sales display which the customer is able to scan to receive his digital receipt straight to his phone.

Similarly, for integrated payment devices or self-checkout, the customer selects the digital receipt option to generate the QR code for scanning.

Customer benefits

- Simple to use
- No time-consuming registration
- Receipts stored safely on their mobile phone
- Helps to protect the environment by saving paper

Retailer benefits

- Cost-effective solution
- Save money on paper
- Save time changing paper rolls
- Option of online access to all receipts
- Promote environmentally friendly practices
- Enhance the consumer experience

Helpdesk

The helpdesk (or digital receipt desk) is an optional feature that stores all of the transaction receipts for retrieval as required. The receipt desk is simple to use with an advanced search facility, to quickly and easily locate receipts for email to customers on request.
